Title : ALA for Finals
Subject : CCS 234 / Networking & Communications
Description : Students will design and develop an individual network monitoring application that can discover devices on a local network, monitor connectivity, analyze network performance, and generate diagnostic reports.
Project Duration : October 29 – December 5, 2026
Project Content : Documentation

1. **Chapter 1 – Introduction**
   - Background
   - Problem Statement
   - Objectives
2. **Chapter 2 – System Design**
   - Network Architecture
   - Flow chart
   - Use Case Diagram
3. **Chapter 3 – Implementation**
   - Tools Used
   - Source Code Description
4. **Chapter 4 – Results and Testing**
   - Screenshots
   - Performance Evaluation
5. **Chapter 5 – Conclusions and Recommendations**
6. **References**
7. Submit your documents using the following attributes (Times New Roman, 12 points, full justified and uses only bold, italic & underline, double-spaced). Use the page template attached.

Presentation Slides : 10 – 15 slides

1. Title
2. Project Overview
3. Problem
4. Objectives
5. Methodology
6. Architecture
7. Features
8. Demonstration
9. Results
10. Conclusion

Demonstration Video: 5-10 minutes (in formal attire)

1. Application Start-up
2. Program Features
3. Testing Results
4. Final Output

Grading Matrix :

Criteria	Description	Points
Functionality	System works correctly and meets requirements	30
Technical Implementation	Proper use of networking concepts, protocols, and tools	20
User Interface and Design	Professional appearance and usability	10
Documentation	Quality of report, diagrams, and technical writing	15
Testing and Evaluation	Evidence of testing and analysis	10
Presentation and Demonstration	Clear explanation and project defense	10
Innovation and Creativity	Additional unique features	5
TOTAL		**100**

- **Functionality Rubrics (30 points)**

Level	Description	Points
Excellent	All requirements implemented and working	27–30
Very Good	Minor issues present	23–26
Good	Most requirements working	19–22
Fair	Several incomplete functions	15–18
Poor	Major functionality missing	0–14

- **Technical Implementation Rubrics (20 points)**

Level	Description	Points
Excellent	Demonstrates excellent networking knowledge	18–20
Very Good	Appropriate use of protocols and tools	15–17
Good	Adequate implementation	12–14
Fair	Limited networking integration	8–11
Poor	Weak application of concepts	0–7

Submission Requirements - Students must submit a compressed folder named:
LASTNAME_FIRSTNAME_FINALPROJECT.zip
Containing:

- /SourceCode
- /Documentation – exclude from zip file, to be submitted online via TEAMS
- /Presentation
- /VideoDemo
- README.txt
